CONTENTS

I. Introduction	1
II. Methodology	1
A. Datasets and spatial templates	1
B. Likelihood and forward model	1
C. Inference procedure	1
III. Results	1
IV. Discussion and conclusions	1
Acknowledgments	1
Appendix	1
References	2

Contract Number DE-SC0012567. We thank the *Fermi*-LAT Collaboration for making publicly available the γ -ray data used in this work. This research has made use of NASA’s Astrophysics Data System. This research made use of the `astropy` [1, 2], `dynesty` [3], `getdist` [4], `IPython` [5], `Jupyter` [6], `matplotlib` [7], `MLflow` [8], `nflows` [9], `NPTFit` [10], `NPTFit-Sim` [11], `NumPy` [12], `pandas` [13], `PyGSP` [14], `Pyro` [15], `PyTorch` [16], `PyTorch Geometric` [17], `PyTorch Lightning` [18], `seaborn` [19], `sbi` [20], `scikit-learn` [21], `SciPy` [22], and `tqdm` [23] software packages.

APPENDIX

I. INTRODUCTION

II. METHODOLOGY

A. Datasets and spatial templates

B. Likelihood and forward model

C. Inference procedure

III. RESULTS

IV. DISCUSSION AND CONCLUSIONS

ACKNOWLEDGMENTS

This work is supported by the National Science Foundation under Cooperative Agreement PHY-2019786 (The NSF AI Institute for Artificial Intelligence and Fundamental Interactions, <http://iaifi.org/>). This material is based upon work supported by the U.S. Department of Energy, Office of Science, Office of High Energy Physics of U.S. Department of Energy under grant
